## Summary

Hi there!

I'm Numan Shahid, and I'm really into making awesome websites. I love learning new stuff, especially in web development. I'm like a sponge when it comes to picking up the latest tricks and trends in this field. I can quickly catch on to new tech and use the best ways to get the job done right.

In 2022, I got to work on Android apps during a 2-month internship with Ingendev. It was a blast! From July to September, I got really good at using Java and XML. I even created some cool Android apps like a weather app, a calculator, and even a 2D game using Android Studio.

But I didn't stop there. After my internship, I discovered Flutter, and it clicked with me. I used Dart to make different apps, like a to-do list app and a food app. They turned out pretty cool!

After my adventure in mobile apps, I turned my focus back to web development. I love making websites look amazing and easy to use, especially for online stores. I'm skilled in HTML, CSS, PHP, MySQL, JavaScript, and Bootstrap. I've made lots of cool web apps, like a 2D game called "Bullet-Hop," a YouTube clone using PHP and databases, and even a responsive clothing store app and many landing pages.

I pay a lot of attention to detail and I'm great at solving problems. That's why the websites I create not only look good but also work really well. I take a lot of pride in my work, and I'm always aiming to make digital experiences that go above and beyond what you'd expect.

## Experience

### React Developer

Self-employed

Sep 2023 - Present (2 months)

"I stay updated with the latest technologies and trends in web development. Recently, I've been actively working on React.js, a JavaScript library. I've completed multiple projects using React.js, including two 2D web-based games called 'Sword and Shield' and 'Zombie Slayer.' Additionally, I've created a portfolio website for myself and hosted it on Firebase. I ensured that the website is responsive and works well on all devices. In addition to these projects, I've also developed landing pages using React.js. Currently, I'm working on several new projects to further improve my skills. I'm well-versed in React hooks like useState and useEffect and am continuously exploring more in this field."

### Web Developer

Self-employed

Feb 2023 - Present (9 months)

As a self-learner, I've embraced the opportunity to constantly delve into fresh techniques and keep myself in the loop regarding the latest trends in web development. I take immense pride in my capacity to swiftly adapt to emerging technologies and adopt industry-best practices, guaranteeing that my skills are always at the cutting edge.

My true passion lies in crafting websites that are not only visually captivating but also user-friendly, with a special focus on e-commerce ventures. Armed with expertise in HTML, CSS, JavaScript, Bootstrap, and React.JS, I excel at translating intricate concepts into streamlined and efficient code. My keen eye for detail and knack for problem-solving guarantee that the websites I create are not only aesthetically pleasing but also fully functional.

## Flutter Developer

Self-employed

Feb 2023 - Jun 2023 (5 months)

Since I started learning in February 2023, I have been actively practicing and gaining hands-on experience in Flutter app development. I always stay updated with the latest trends and technologies in the field and am excited to work on innovative projects with talented professionals in the mobile app development industry. In addition, I had an internship in July 2022 where I learned Android Studio, which made it easy for me to pick up Flutter. This experience gave me a solid foundation and fueled my enthusiasm for learning. I'm now eager to apply my skills and internship experience to contribute to exciting projects in flutter app development :)

## Android Studio

IngineDev

Jul 2022 - Sep 2022 (3 months)

In the middle of July 2022, I participated in an internship focused on Android Studio. This experience greatly helped me understand how mobile applications work. I learned about things like data delivery through APIs and how different components of an app function together. During the internship, I used Java for the app's backend and XML for its front end. This allowed me to improve my skills in object-oriented programming and learn many practical techniques. I also got to explore the extensive library of Android Studio and discovered how to add animations to make apps more engaging. Overall, this internship enhanced my abilities and sparked my passion for creating outstanding mobile app experiences

## Education

### University Of Central Punjab

Bachelor's degree, Computer Software Engineering

2021 - 2025

## Skills

Bootstrap (Framework) • React.js • JavaScript • Web Development • PHP • Android & IOS Development • HTML • Cascading Style Sheets (CSS)
